

I use windows live mail. Sometimes I get attachments inWord, Excel, etc. If I open the document from mail, and hit "save" I can not find out where it saves. It does not save in any temp file that I can see.

Someone gave me their computer. They claim a windows update screwed it up and it won't boot.

I verified that it won't boot. I can boot a live OS so the hardware is fine.

Windows doesn't want to repair itself and a recover disk won't fix it either. Before I spent more time on it they got a new computer and now want their mail and contacts moved to the new computer.

A quick google told me that Windows Live Mail typically stores its data in

C:\users*username*\AppData\Local\Microsoft\Windows Live Mail.

I found a bunch of data there.

I hoped I could just copy it to the same directory on the new computer, but that didn't do anything.

Does anyone know a quick way to get their old mail all working on the new computer, to include contacts and mail that was stored locally but is no longer on the server?

I haven't worked with Windows Live Mail at all so I'm wondering if someone else has a quick answer before I delve into this. :)

where to download windows live mail

DOWNLOAD  <https://psfmi.com/2xytIk>

This means that any users who still run Live Mail 2012 will not be able to send and receive messages or sync contacts and calendar entries on any outlook.com, hotmail.com, live.com, and msn.com address. After the switch-off is complete, the Live Mail 2012 client will only be able to open files from outlook.com that have been stored locally.
